Behavioral Risk Factor Surveillance System

Calculated Variables

(Version 13 – Revised 09/01/2005)

Calculated Variables on the 2002 Behavioral Risk Factor Surveillance System Data File

Variables that begin with an underscore (e.g. _RFHYPE3) are calculated from questionnaire variables. Exceptions are: _DENSTR, _GEOSTR, _RECORD, and _STATE, which are determined before the interview.

Variables that end with an underscore are intermediate variables used to calculate risk factors and indices that are being included in the data set. (Example: FTJUDAY_)

A number of calculated variables are used to weight the data and reflect sample design and other information, and are therefore not included in the descriptive text below. The weighting/sample design variables are:

AGEG, _CSA, _DENWT, _FINALWT, _GEOWT, _IMPAGE, _IMPNPH, _MSACODE, _POSTSTR, _QSTVER, _RACEG2_, _RAW, _REGION, _SEXG_, _STSTR, and _WT2.

NEW VARIABLES FOR 2002 ARE:

(These are intermediate variables used to calculate other calculated variables and risk factors. These have not been included with the data set in previous years.)

FTJUDAY_, FRUTDAY_, GNSLDAY_, POTADAY_, CRTSDAY_, VEGEDAY_, DROCCDY_

(These are new calculated variables and risk factors for 2002.)

_LTASTHM, _CASTHMA, _ASTHMST, _EXTEETH, _ALTEETH, _DENTVST, _FLUSHOT, _PNEUMOC, _BRCNTRL_, _BCMETML_, _BCMETF_, _RFMAM2Y, _RFPAP3Y, _RFPSA2Y, _RFBLDST, _RFSIGMD, _AIDSTST, _HIGHRSK, _STDCNDM, _RFFRARM, _RFFRAR2, _MCNTRAC, _FCNTRAC

_DRNKDY2
(Variable changed from 2001.)

This variable is derived from DROCCDY_ and AVEDRNK. It is derived by multiplying the total number of occasions per day (DROCCDY_) by the average number of drinks per occasion (AVEDRNK). Respondents who did not drink in the past month (DROCCDY_=0) are assigned the value 0. Respondents who refused, did not know the quantity consumed or with missing responses (AVEDRNK=.,77,99) or refused, with missing responses or did not know how many times per day they consumed alcohol (DROCCDY_=9) are assigned the value 99. DRNKDY2 is stored in the data set with two implied decimal places. To get the actual value, divide DRNKDY2 by 100. (Variable name was changed from 2001 due to the change to DROCCDY_.)

SAS code:

```
IF DROCCDY_=0 THEN _DRNKDY2=0;

_DRNKMO2
(Variable changed from 2001.)

Total Number of Drinks a Month. Variable is derived from the variable _DRNKDY2 by multiplying _DRNKDY2 by 30. Respondents who did not drink the past month are assigned the value "0". Variable name was changed from 2001 due to the change from _DRNKDAY to _DRNKDY2.

Section 12: Demographics Overweight & Obese

HTIN *Reported height in inches.* Variable is derived from HEIGHT. It uses the foot portion of HEIGHT multiplied by 12, plus the inch portion to calculate overall height in inches. (Note: HTIN gets rounded after all of the BMI calculations occur to make sure that there are no decimals.)

SAS code:

```
* CREATE HEIGHT1 CHARACTER VARIABLE;
HEIGHT1=PUT(HEIGHT,3.);
IF HEIGHT NOT IN (777,999) THEN DO;
HTIN=( INPUT((SUBSTR(HEIGHT1,2,2)),2.)) +

END;

HTIN = round(HTIN,1); *
IF HTIN=. THEN HTIN=99; *This is done after all of the
BMI calculations but the code is included here;
```

HTM *Reported height in meters.* Variable is derived from the variable HTIN. Height in inches is converted to height in centimeters by using the conversion factor 2.54 cm/in. (Note: HTM is stored in the data set with two implied decimal places. It gets rounded after all of the BMI calculations are completed therefore all calculations include the decimals.)

SAS code:

```
HTM=(HTIN * 2.54) / 100;

HTM = round((HTM*100),1); *
IF HTM=. THEN HTM=999; *This is done after all of
the BMI calculations but the code is included here;

WTKG *Reported weight in kilograms.* Variable is derived from WEIGHT. Weight in pounds is converted to weight in kilograms by using the conversion factor 2.2 kg/lb. (Note: WTKG is stored in the data set with two implied decimal places. It gets rounded after all of the BMI calculations are completed therefore all calculations include the decimals.)

SAS code:

END;

WTKG = round((WTKG*100),1); *

the BMI calculations but the code is included here;
